

Network Manager

Electricity Distribution; planning & controlling of network maintenance & construction programme

- Focus: safety, reliability & service delivery to customers
- Strengths: leadership, relationships, project management & technologies
- Opportunity: senior electrical engineer & leader; growth & innovation

Network Waitaki owns and manages the lines network that supplies power to the North Otago region and Hakataramea Valley bounded by the Waitaki River to the north and Shag Point in the South, providing efficient, sustainable power supply and related services to customers in the region.

This position is a key member of the management team who are leading an exciting phase of change to support growth and efficiencies associated with emerging technologies and service delivery in a prosperous region. This Network team provides critical and control room operations to ensure Network performance to standards, planning for project management of new connections, maintenance and capital works programme to ensure asset availability and reliability in accordance with the Asset Management Plan.

We envisage you to be a collaborative style leader who proactively coaches a team to achieve their potential and works effectively in cross-functional teams to achieve shared goals within a programme of work. The Network division contribution to Company strategic plans is also part of this function.

Accountabilities;

- Health & Safety; ensure compliance to the Public Safety Management System to protect all from harm.
- Leadership; motivate and manage team to capacity & desired performance
- Project Planning & Management; maintenance & development of the Network
- Control Room; operations are reliable & achieve performance standards
- Information Technology; contribute to & implement innovation & development
- Financial; budgeting & reporting to Network & Company plan
- Strategy; Network strategy aligned to Company strategy
- Relationships & Service Delivery; positive internal & external impacts
- Regulatory & Statutory Compliance; apply currency of knowledge/reporting
- Continuous Improvement; proactive contribution

This is an excellent career opportunity for a senior electrical engineer; qualified by Degree qualification and an IPENZ Chartered Professional Engineer membership, together with at least 10 years' experience including exposure to the Electricity Distribution industry.
